Comprehensive solutions for advanced skin and wound care
NEVER COMPROMISE ON CARE℠

With McKesson Brands, you’ll never have to compromise. We deliver quality products at competitive prices, backed by our 100% satisfaction guarantee. We have decades of experience in the market, and we offer you support and work to help ensure you have the products you need, when you need them – making it even easier for you to provide the best care for your patients.

Satisfaction Guaranteed

If you are not completely satisfied with any McKesson Brands product, you may return it for a full refund or credit.

Skin and wound care present a variety of business and caregiving challenges.

Here’s your opportunity...

• To help save money, without compromising quality or performance.
• To access exclusive skin care products and complimentary clinical support.
• To be satisfied with skin and wound care solutions that your staff and residents/patients deserve.

Clinical and Business Support – We can help you overcome the challenges of care

**McKesson Clinical Connection™**

At McKesson Medical-Surgical, we work to understand your daily challenges so that, together, we can develop a customized plan to address your clinical support needs.

**The McKesson Clinical Connection™ offers:**

**Clinical Resource Team**

Our engaged and experienced clinicians are just a phone call away. Contact the Clinical Resource Team at 877.611.0081.

**Online education**

Our online education portal provides access to courses for CNAs and licensed professionals. Contact your McKesson Medical-Surgical Account Manager or the Clinical Resource Team for access to our e-learning portal.

**Webinars**

Presentations provide educational training and can be tailored to meet your needs.

**Product selection guides**

We offer product selection guides that provide information on selecting products to meet your advanced wound care needs. Customizable versions are also available.

See pages 6-9 for more details.

**Business Support**

We are pleased to offer a variety of comprehensive business support tools to assist you in creating the right solution for your facility.

These complimentary tools will help you properly evaluate your business performance on an individualized basis to reduce costs, increase efficiencies and provide the quality of care your residents/patients deserve.

- **F314 Wound Care QuickPath** – Review your current wound care management program.
- **McKesson SpendManager™** – Review and track your advanced wound care spend with our robust reporting tools.

**Educational Support**

We offer a variety of educational tools to assist you in training your staff on the challenges of wound care.

**The educational tools below are provided to help you educate your staff:**

- Skin Assessment
- Wound Assessment
  - Algorithm
  - Healthy and Necrotic Tissue
  - Wound Infection
  - Types of Tissue Breakdown
  - Pressure Ulcers
- Product Selection Guides for Skin and Wound Care

See pages 6-11 for more details.

Ask your McKesson Medical-Surgical Account Manager about taking advantage of these opportunities today.
Advanced Skin and Wound Care Solutions

### Advanced Skin Care

Healthier skin means healthier residents/patients and improved clinical outcomes. Our THERA™ Advanced Skin Care products provide a first line of defense against skin issues and irritations.

Choose from our THERA™ Advanced Skin Care product line enriched with an all-in-one proprietary blend of vitamins and nourishing ingredients.

**Our products can help you address a variety of skin care needs by:**
- Cleansing
- Moisturizing
- Protecting
- Helping to prevent skin breakdown
- Treating

*See pages 10-11 for more details.*

### Advanced Wound Care

Wound care can be costly and complicated. Our dressings can help you make the challenges of managing wounds easier on your staff and your business.

**McKesson Medical-Surgical offers comprehensive wound care products including:**
- Wound Cleansers
- Wound Measuring Guides
- Xeroform
- Hydrogels
- Hydrophilic Wound Dressings
- Transparent Films
- Hydrocolloids
- Silicone Adhesive Foams
- Adhesive and Non-Adhesive Foams
- Calcium Alginites
- Calcium Alginites with Antimicrobial Silver
- MEDIHONEY™
- Island Dressings
- Barrier Island Dressings
- Super Absorbent Dressings
- Unna Boots
- Multi-Layer Compression Bandages

*See pages 12-37 for more details.*

2. The skin protection claim does not apply to the Foaming Body Cleanser and the Antifungal Body Powder.
Assessing the Skin

Skin Conditions

**Intact, Dry:**
Also called xerosis, the epidermis lacks moisture or sebum, often characterized by a pattern of fine lines, scaling and itching. Causes include too frequent bathing, low humidity and decreased production of sebum in aging skin.

**Wet, Cracked, Raw:**
Denuded skin results from the loss of the epidermis, causing partial thickness breakdown of the skin into the dermis. The denuded area is raw and weepy. Macerated skin is waterlogged skin; if it is not protected from moisture it may lead to denudement.

**Dry, Flaky, Cracked:**
Skin lacks adequate moisture or sebum resulting in excessive drying of the skin. It leads to flaking of the epidermis and cracks and fissures that may extend into the dermis. Cracks in the skin may result in portals for infection.

**Folds/Intertriginous Areas:**
Intertriginous is a term used to define an area where two skin areas may touch or rub together.

**Erythema:**
The presence of bright or dark, red skin or darkening of normal skin.

**Fungal Rash:**
Signs and symptoms of fungal rash may include severe itching, burning, soreness and irritation. Impairment of the integrity of the skin due to moisture is a common contributing factor.
Assessing Wounds

Wound Care Algorithm

WOUND CARE ESSENTIALS

TREAT CAUSE & CONTRIBUTING FACTORS
e.g., blood supply, pressure, friction, shear, edema, nutrition, incontinence, etc.

LOCAL WOUND CARE

DEBRIDEMENT
Autolytic, Enzymatic, Surgical

TREAT INFECTION
Cleansing, Topical Antimicrobial Dressings, Antibiotics

MANAGE EDEMA
Multi-Layer Compression Bandage Systems, Unna Boots

MOISTURE BALANCE

MINIMAL DRAINAGE
Hydrogel, Hydrocolloid, MEDIHONEY™ Gel, MEDIHONEY™ Honeycolloid, Transparent Film, Xeroform Dressings

MODERATE TO HEAVY DRAINAGE
Adhesive and Non-Adhesive Foam, Calcium Alginate, Calcium Alginate with Antimicrobial Silver, MEDIHONEY™ Calcium Alginate, Silicone Adhesive Foam, Super Absorbent Dressings

Elements of Wound Assessment

Location: Refers to specific body part or bony prominence over which the wound is located.

Etiology: Pressure, venous, diabetic, arterial, surgical, traumatic.

Classification: Stage (for pressure ulcers); full or partial thickness.

Measurement: Length x width x depth in centimeters. Assess for undermining and tunneling.

Wound bed: Cleanse prior to assessment. Determine tissue type (granulation, slough, eschar, epithelialization, anatomical structures) and the percentage of each tissue type.

Exudate amount and character: None, light, moderate, heavy. Serous, serosanguineous, sanguineous, purulent, color and consistency.

Surrounding skin: Normal, red/erythematous, blanchable, non-blanchable, hyperpigmented, macerated, rash, indurated, edematous.

Wound edges: Healthy, diffuse, well defined, undermined, rolled under (epibole), fibrotic, calloused.

Signs of infection: Pain, erythema, edema, heat/warmth, increased drainage, purulence, foul odor, delayed healing.

Pain: Assess for pain related to the wound in general, as well as how it relates to the treatment or dressing change. Use a pain scale to get a more quantitative assessment.

Accurate documentation: Document according to facility policy and procedure so progress to goals can be determined. Accurately document findings.

1. MEDIHONEY® is a registered trademark of MEDIHONEY Pty Ltd. and licensed to Derma Sciences, Inc. MEDIHONEY® is not a private label product of McKesson but is available for distribution through McKesson’s exclusive brand of Advanced Wound Care products.
Assessing Wounds

Healthy Tissue

Granulation Tissue: The pink/red moist tissue composed of new blood vessels, connective tissue, fibroblasts, and inflammatory cells, which fills an open wound when it starts to heal; typically appears deep pink or red with an irregular, granular surface.

Epithelialization: The process of becoming covered with or converted to epithelium. New epithelial cells advance across the wound until they eventually meet epithelial cells moving in from the opposite direction.

Necrotic Tissue/Debridement

Debridement is the removal of necrotic or devitalized tissue from the wound bed. The presence of necrotic tissue increases the risk for bacterial growth and infection, and its presence generally impairs the natural healing process. The most common methods of debridement include autolytic, enzymatic and surgical. Necrotic tissue in a wound is typically referred to as either slough or eschar.

Slough: Soft moist avascular (devitalized) tissue; may be white, yellow, tan, or green; may be loose or firmly adherent.

Eschar: Black or brown necrotic, devitalized tissue; tissue may be loose or firmly adherent, hard, soft or soggy.

Autolytic debridement: Removal of devitalized tissue accomplished by the use of moisture retentive dressings. Maintaining a moist wound environment and moisture balance will facilitate the body’s own enzymes and white blood cells in debridement of necrotic tissue.

When not to debride: Typically when pressure ulcers are located on the heel, ear or other site with little subcutaneous or muscle tissue and are covered with a dry, stable eschar, they should not be debrided.

Debridement is also generally not recommended for arterial ulcers and diabetic ulcers with dry eschar or dry gangrene, without infection and with an insufficient vascular supply for healing, unless circulation to the area can be improved.

Wound Infection

A wound is considered infected when replicating organisms invade the tissues and a host immune response is detected. The only way to definitively determine infection is with a wound culture or tissue biopsy. Two commonly used techniques for obtaining a wound culture (aerobic and anaerobic) by swab are the Z-stroke and Levine techniques. Always first cleanse the wound with normal saline and culture viable tissue; do not culture necrotic tissue, purulent drainage or hard, dry eschar.

Clinical Signs and Symptoms of Infection

Pain: Increased pain in the peri-ulcer area.

Erythema: The presence of bright or dark red skin or darkening of normal skin color immediately adjacent to the ulcer.

Edema: The presence of shiny taut skin or pitting impressions in the skin adjacent to the ulcer but within 4 cm of the ulcer margin.

Heat/warmth: A detectable increase in temperature of the skin adjacent to the ulcer (within 4 cm of the ulcer margin) as compared to skin 10 cm proximal to the wound.

Drainage: Increase in amount of drainage and purulent drainage.

Foul odor: Assess for odor after cleansing the wound thoroughly.

Delayed healing: An absence of change or an increase in volume or surface area of the ulcer over the preceding 4 weeks.
Types of Tissue Breakdown

There are many types of wounds. Some wounds are caused by pressure and deemed pressure ulcers and others such as diabetic/arterial ulcers, venous leg ulcers and skin tears are described as either partial or full thickness to indicate the depth of tissue breakdown.

Partial Thickness Wound:
Confined to the superficial skin layers; damage does not penetrate below the dermis and may be limited to the epidermal layers only.

Full Thickness Wound:
Ulcration extending through the dermis to involve subcutaneous tissue and possibly muscle/bone.

Pressure Ulcers

Localized injury to the skin and/or underlying tissue usually over a bony prominence, as a result of pressure or pressure in combination with shear and/or friction. A number of contributing or confounding factors are also associated with pressure ulcers; the significance of these factors is yet to be elucidated. Pressure ulcers are broken down into stages:

Stage I:
Intact skin with non-blanchable redness of a localized area usually over a bony prominence. Darkly pigmented skin may not have visible blanching: its color may differ from the surrounding area.

Further description: The area may be painful, firm, soft, warmer or cooler as compared to adjacent tissue. Stage I may be difficult to detect in individuals with dark skin tones. May indicate “at risk” persons (a heralding sign of risk).

Stage II:
Partial thickness loss of dermis presenting as a shallow open ulcer with a red pink wound bed, without slough. May also present as an intact or open/ruptured serum-filled blister.

Further description: Presents as a shiny or dry shallow ulcer without slough or bruising. This stage should not be used to describe skin tears, tape burns, perineal dermatitis, maceration or excoriation. Bruising indicates suspected deep tissue injury.

Stage III:
Full thickness tissue loss. Subcutaneous fat may be visible but bone, tendon or muscle are not exposed. Slough may be present but does not obscure the depth of tissue loss. May include undermining and tunneling.

Further description: The depth of a Stage III pressure ulcer varies by anatomical location. The bridge of the nose, ear, occiput and malleolus do not have subcutaneous tissue and these ulcers can be shallow. Stage IV ulcers can extend into muscle and/or supporting structures (e.g., fascia, tendon or joint capsule) making osteomyelitis possible. Exposed bone/tendon is visible or directly palpable.

Suspected Deep Tissue Injury:
Purple or maroon localized area of discolored intact skin or blood-filled blister due to the damage of underlying soft tissue from pressure and/or shear. The area may be preceded by tissue that is painful, firm, mushy, boggy, warmer or cooler as compared to adjacent tissue.

Further description: Deep tissue injury may be difficult to detect in individuals with dark skin tones. Evolution may include a thin blister over a dark wound bed. The wound may further evolve and become covered by thin eschar. Evolution may be rapid exposing additional layers of tissue even with optimal treatment.

Unstageable:
Full thickness tissue loss in which the base of the ulcer is covered by slough (yellow, tan, gray, green or brown) and/or eschar (tan, brown or black) in the wound bed.

Further description: Until enough slough and/or eschar is removed to expose the base of the wound, the true depth, and therefore stage, cannot be determined. Stable (dry, adherent, intact without erythema or fluctuance) eschar on the heels serves as “the body’s natural (biological) cover” and should not be removed.

ADDRESSING GOALS – Product Selection Guides

Connecting the right product to the right application is critical to achieving goals with skin and wound assessment and treatment. Product selection guides for skin care and wound care are available. For more information, contact the Clinical Resource Team at 877.611.0081.
I have provided care for over 20 years to patients with fragile and compromised skin, and I am very proud to support the THERA Advanced Skin Care products. All of the products are formulated with SAFFLEX™ to aid in soothing and nourishing the skin while providing clinicians with an optimal skin care system for their patients.

Mary Petersen, RN, BSN, CWOCN

McKesson Medical-Surgical’s Board-Certified Wound, Ostomy, Continence Nurses are ready to help you today. Have questions or need educational support? Call our clinicians at 877.611.0081.

2. The skin protection claim does not apply to the Foaming Body Cleanser and the Antifungal Body Powder.

### Cleanses
- **Cleanses**
  - Cleanses
    - No-rinse
    - Head-to-toe / Hair & body
    - Antiseptic / Reduces & inhibits bacterial growth
    - Exfoliates
    - Peri wash
    - Moisturizes
    - Protects / Acts as a barrier

### Moisturizes
- **Moisturizes**
  - Face
  - Body
  - Long-lasting hydration

### Protects
- **Protects**
  - Dry skin
  - Dry, cracked skin
  - Wet, cracked skin
  - Itching
  - Against excess moisture
  - Minor irritation

### Helps Prevent
- **Helps Prevent**
  - Excess Trans Epidermal Water Loss (e-TEWL) by sealing in moisture
  - Diaper rash caused by wetness from urine
  -Diaper rash caused by wetness from stool

### Treats
- **Treats**
  - Athlete’s foot
  - Jock itch
  - Ringworm
  - Fungal skin irritation
  -Diaper rash caused by wetness and/or stool

COMPREHENSIVE SOLUTIONS FOR ADVANCED SKIN AND WOUND CARE

Treatment

Advanced Wound Care Product Portfolio

McKesson Medical-Surgical offers a comprehensive line of advanced wound care products, complete with instructional packaging, to meet your needs: Wound Cleansers and Measuring Guides, Xeroform Dressings, Hydrogels, Hydrophilic Wound Dressings, Transparent Films, Hydrocolloids, Adhesive and Non-Adhesive Foams, Calcium Alginites, Calcium Alginites with Antimicrobial Silver, MEDIHONEY®, Island Dressings, Barrier Island Dressings, Super Absorbent Dressings, Unna Boots, Unna Boots with Calamine and Multi-Layer Compression Bandages. We’re also proud to expand our product offering to include Silicone Adhesive Foam Dressings.
Based on direct feedback from clinicians, we know that properly selecting and using the right wound care product can be an ongoing challenge. That’s why we’ve made it easier to identify the products and have provided instructions for use. We are committed to finding ways to make the treatment of wounds less challenging for you.

1. MEDIHONEY® is a registered trademark of Medihoney Pty Ltd. and licensed to Derma Sciences, Inc. MEDIHONEY® is not a private label product of McKesson but is available for distribution through McKesson's exclusive brand of Advanced Wound Care products.
Importance of wound cleaning and wound measuring:

It is important to cleanse a wound prior to assessing and redressing it. Wound cleansing helps to decrease the bacterial load or bioburden on the wound surface and also helps flush away dead cells and wound debris. McKesson Medical-Surgical offers two types of wound cleansers.

It is important to measure wounds on a consistent basis. Measuring the wound provides objective data that is critical in assessing progression of healing. McKesson Medical-Surgical offers two types of measuring devices.
**Wound Cleansers / Wound Measuring Guides**

**Dermal Wound Cleanser**: Non-sterile, no-rinse, non-irritating, preserved wound cleanser is for multiple use on chronic and acute wounds. Adjustable nozzle to allow for gentle spray or stream delivery for cleansing and removing dirt and debris.

**Saline Wound Flush**: Sterile saline (0.9% USP Sodium Chloride solution) wound flush for gentle cleansing and removal of dirt and debris. Pressurized to dispense at 4-13 psi. Preservative-free.

**Wound Measuring Guide – Circular Grid**
- Disposable clear plastic 5" x 7" sheet
- Circular bull’s-eye grid measures wound diameter in centimeters
- Facilitates obtaining a wound tracing
- Contains ample space to document patient name and date
- Designed for easy, single-use convenience

**Wound Measuring Guide – 6" Ruler**
- Disposable white paper 6" ruler
- Calibrated in inches and centimeter equivalents
- Contains ample space to document patient name and date
- Designed for easy, single-use convenience

¹ MEDIHONEY® is a registered trademark of MEDIHONEY Pty Ltd. and licensed to Derma Sciences, Inc. MEDIHONEY® is not a private label product of McKesson but is available for distribution through McKesson's exclusive brand of Advanced Wound Care products.
**Xeroform**

**Xeroform** contains 3% Bismuth Tribromophenate to provide bacteriostatic properties and help to reduce risk of infection and deodorize the wound. Primary dressing for wounds with light or no exudate. Helps maintain a moist wound healing environment to assist in autolytic debridement.

**Indications:**
Open wounds, cancer resections, burns, donor sites and surgical incisions.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components.

**Change Frequency:**
Change dressing as directed by a healthcare professional.

**Recommended Secondary Dressings:**
Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change.

*Exudate level indicates highest level of exudate that the dressing can accommodate.

---

For clinical information about our products, call 877.611.0081. To order, visit mms.mckesson.com or call your McKesson Medical-Surgical Account Manager.
Hydrogels

*Hydrogels* are used as a primary dressing for wounds with light or no exudate to add or maintain moisture at the wound bed. Helps maintain a moist wound healing environment to assist in autolytic debridement. To protect peri-wound skin from maceration, apply a moisture barrier ointment or barrier film. Available in amorphous, impregnated gauze and sheet forms.

**Indications:**
Provide moist wound healing environment and help promote autolytic debridement.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components.

**Change Frequency:**
Hydrogel Amorphous Dressings should be changed daily or as directed by a physician. Other Hydrogel Dressings should be changed as directed by a healthcare professional.

**Recommended Secondary Dressings:**
Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change.

Hydrophilic Wound Dressing

Hydrophilic Wound Dressing with Zinc, Vitamins A and B6, Calcium and Magnesium. Can be applied directly to the wound bed. Formulated with a patented zinc-nutrient formulation, and along with its balanced pH technology, provides a moist, mildly acidic environment conducive to wound healing.

**Indications:**
Pressure ulcers I-IV, surgical incisions, tissue trauma, partial thickness wounds, thermal burns, diabetic and venous stasis ulcers.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components.

**Change Frequency:**
Change dressing daily or as directed by a physician.

**Recommended Secondary Dressings:**
Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change.

Transparent Films

Transparent Films are used as a primary or secondary dressing. Helps maintain a moist wound surface to assist in autolytic debridement in wounds with necrotic tissue. Film dressings are thin and water-resistant, and water, bacteria or other contaminants cannot penetrate the dressing. They are moisture vapor permeable which aids in moisture management. Allows wound site to be visually monitored.

Indications:
Protect wounds and IV catheter sites, helps maintain a moist wound surface to assist in autolytic debridement, maintain a moist environment for wound healing and as a secondary dressing.

Contraindications:
Patients with a known hypersensitivity to the product itself or to its components.

Change Frequency:
Change dressing as directed by a healthcare professional.

Recommended Secondary Dressings:
n/a

Hydrocolloids

Hydrocolloids are used as a primary or secondary dressing for wounds with light to moderate exudate. Helps maintain a moist wound environment to assist in autolytic debridement. When in contact with wound exudate, the dressing forms a fluid/gel environment over the wound bed. Dressing does not break down or leave residue in the wound. Smooth, tapered design helps prevent edge roll-up.

Thin and Film Back versions feature smooth, tapered design to help minimize friction and prevent dressing edges from rolling up. Thin hydrocolloid is semi-transparent, allowing visualization of the wound. Moisture-resistant backing helps prevent urine, feces or moisture from penetrating the dressing to reduce risk of contamination.

Indications:
Management of partial and full thickness wounds such as leg ulcers and pressure ulcers. Help maintain a moist wound healing environment to assist in autolytic debridement and protect the wound from external contamination.

Contraindications:
Patients with known hypersensitivities to the components of the dressing or third-degree burns. Conditions that lead to the formation of the wound (pressure, venous insufficiency, etc.) must be considered and addressed as part of the total wound care treatment plan.

Change Frequency:
Dressing change frequency is dependent upon the amount of drainage. May be left in place for up to seven days or as directed by a healthcare professional.

Recommended Secondary Dressings:

Silicone Adhesive Foams

Silicone Adhesive Foams are a highly conformable primary or secondary dressing for wounds with moderate exudate. Perforated, soft silicone gel adhesive provides gentle, but firm, adhesion and minimizes pain and trauma to the wound and skin upon removal. Dressing may be lifted and repositioned without losing its adherent properties. Breathable, yet moisture- and bacteria-resistant outer film layer seals the wound margins. Absorbent inner hydrocellular foam pad maintains a moist wound environment to help promote healing. Excellent dressing choice when fragile skin is a concern.

Indications:
Wide range of acute and chronic wounds like venous leg ulcers, pressure ulcers, diabetic ulcers and traumatic wounds.

Contraindications:
Patients with a known hypersensitivity to the product itself or to its components.

Change Frequency:
Change dressing as directed by a healthcare professional.

Recommended Secondary Dressings:

Adhesive and Non-Adhesive Foams

**Adhesive and Non-Adhesive Foams** are used as a primary or secondary dressing for wounds with moderate to heavy exudate. Highly absorbent central hydrocellular foam layer effectively absorbs wound drainage. Helps maintain a moist healing environment at the wound surface.

Skin-friendly acrylic adhesive helps ensure that the dressing remains secure. Waterproof and breathable outer layer protects the wound from outside contamination and prevents strike-through of exudate/drainage. Soft and cushioning to help provide better comfort and protection.

**Indications:**
Wounds with moderate to heavy exudate.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components.

**Change Frequency:**
Change dressing as directed by a healthcare professional.

**Recommended Secondary Dressings:**

- **Adhesive Foams:** n/a
- **Non-Adhesive Foams:** Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change or secure with medical tape.

Calcium Alginate Dressings

Calcium Alginate Dressings are used as a primary dressing and can be cut to fit wounds with moderate to heavy exudate. They absorb wound fluid while maintaining a moist wound environment. The alginate, derived from seaweed, turns to a moist gel mass material when saturated. Requires a secondary dressing.

Indications:
Wounds with moderate to heavy exudate. May help absorb minor bleeding.

Contraindications:
Patients with a known hypersensitivity to the product itself or to its components.

Change Frequency:
Change dressing as directed by a healthcare professional.

Recommended Secondary Dressings:
Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change.

EXUDATE LEVEL KEY: • = Light  •• = Moderate  ••• = Heavy

Calcium Alginates with Antimicrobial Silver

**Calcium Alginates with Antimicrobial Silver** assist with infection reduction and decreasing bioburden. Primary dressing that can be cut to fit wounds with moderate to heavy exudate. Silver ions are released in the presence of wound fluid and protect the dressing from bacterial colonization and provide an effective barrier to bacterial penetration. Requires a secondary dressing.

**Indications:**
Effective barrier to bacterial penetration in moderate to heavily exuding wounds such as diabetic foot ulcers, leg ulcers, pressure ulcers, partial and full thickness wounds, donor sites and traumatic and surgical wounds.

**Contraindications:**
Third-degree burns, patients with a known sensitivity to alginates or silver and controlling of heavy bleeding. Should not be used with products that create an ionic exchange in the wound site, i.e., do not use with enzymatic debriding agents, but safe to use normal saline to cleanse the wound prior to dressing application.

**Change Frequency:**
Depending on the amount of drainage and the secondary dressing, may be left in place for up to seven days. Change dressing as directed by a healthcare professional.

**Recommended Secondary Dressings:**
Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change.

If debridement and the promotion of healthy tissue is your clinical objective, consider MEDIHONEY® for your wound. MEDIHONEY®'s high osmotic effect pulls fluid from deeper tissues to the wound surface promoting autolytic debridement. The naturally Low pH of MEDIHONEY® helps lower the pH of the wound environment, which can impact chronic and stalled wounds. We offer three types of MEDIHONEY® dressings: Gel, Honeycolloids and Alginites.

**MEDIHONEY® Gel** is a primary dressing for wounds with light to moderate drainage.

**Indications:**
Diabetic foot ulcers, leg ulcers (venous stasis ulcers, arterial ulcers and leg ulcers of mixed etiology), pressure ulcers/sores (partial and full thickness), first and second-degree partial thickness burns, donor sites and traumatic and surgical wounds.

**Contraindications:**
Third-degree burns and patients with a known sensitivity to honey.

**Change Frequency:**
Change dressing as directed by your healthcare professional.

**Recommended Secondary Dressings:**
Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change.

Cover and Absorptive Dressings

McKesson Medical-Surgical offers three types of Cover and Special Absorptive Dressings. Island Dressings and Barrier Island Dressings are indicated for light to moderate amounts of exudate and can act as either a primary or secondary dressing. Super Absorbent Dressings absorb moderate to heavy amounts of exudate and require a secondary dressing to secure them.
Island Dressings

Island Dressings are used as a primary or secondary bordered gauze dressing for wounds with light to moderate exudate. One-step application is an excellent alternative to gauze and tape to help save caregiver time. Non-adherent central gauze pad provides absorption of light to moderate drainage.

**Indications:**
Primary or secondary dressing.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components.

**Change Frequency:**
Change dressing as directed by a healthcare professional.

**Recommended Secondary Dressings:**
n/a

Barrier Island Dressings

**Barrier Island Dressings** are used as a primary or secondary bordered, non-adherent, occlusive gauze composite dressing for wounds with light to moderate exudate. Flexible, conformable, occlusive dressing helps protect wound from outside contamination. Soft, flexible and comfortable for enhanced wearability. Water-resistant film layer acts as effective barrier to outside contamination and permits showering. Offers the convenience of an all-in-one dressing by combining an absorbent non-adherent central gauze pad surrounded by a breathable adhesive border, with a polyurethane film barrier.

**Indications:**
As a primary or secondary dressing, the Barrier Island Dressing provides an effective barrier to outside contaminants and allows for showering with dressing in place.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components.

**Change Frequency:**
Change dressing as directed by a healthcare professional.

**Recommended Secondary Dressings:**
n/a

Super Absorbent Dressings

**Super Absorbent Dressings** have super absorbent polymers that bind wound drainage and convert it to a gel. These dressings hold more fluid, lock fluid inside the dressing, helping to decrease the risk of maceration and keep the harmful wound fluid components away from the wound and peri-wound skin. Contains protective outer layer and non-adherent wound contact layer for easy removal. Can be used as a primary or secondary dressing for moderate to heavy exudate.

**Indications:**
Primary dressing or secondary dressing for partial thickness or full thickness wounds. Use when there is moderate to large amounts of drainage and extra absorbency is needed to help better manage the fluid and decrease the frequency of dressing changes. Excellent dressing for use under compression for heavily draining venous leg ulcers.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components, including the sodium polyacrylate super absorbent polymer. Not for use in tunneling wound pockets as the dressing can expand considerably when wound exudates are absorbed. Not for use on wounds with little to no exudates, as this may cause drying out of the wound.

**Change Frequency:**
Change dressing as directed by a healthcare professional.

**Recommended Secondary Dressings:**
Elastic net retainer dressing or conforming bandage. Medical adhesive tape should not be used due to expansion of the dressing as it absorbs wound fluid.

The proper use and application of Compression Dressings:

Compression Dressings are a mainstay of treatment for managing venous leg ulcers and related conditions. These dressings vary in the amount of stretch and elasticity they provide. The manner of application also plays an important role, and correct application is vital for product effectiveness and to help prevent dressing-related complications. When applied correctly, they provide compression for up to seven days, depending on the amount of drainage. Prior to using Compression Dressings, it is critical to determine the Ankle Brachial Pressure Index (ABI) using a Doppler ultrasound. An ABI less than 0.8 may indicate the presence of significant arterial disease. Unless under direct medical supervision, do not use Compression Dressings if the patient’s ABI is less than 0.8 or if arterial disease is suspected. ABI in patients with diabetes may not show actual level of arterial occlusion.

Unna Boot / Unna Boot with Calamine

Unna Boot is a gauze bandage that has been evenly impregnated with a non-hardening paste of zinc oxide to provide venous ulcer compression therapy. Contains no gelatin. Non-raveling, thread-locked gauze helps prevent loose threads that can contaminate wounds.

Unna Boot with Calamine is a gauze bandage that has been evenly impregnated with a non-hardening paste of zinc oxide and calamine to provide venous ulcer compression therapy and help ease itching.

**Indications:**
Provides venous ulcer compression therapy in actively ambulatory patients. Dries the oozing and weeping of poison ivy, poison oak, or poison sumac. Ideal for managing extremities with conditions such as venous ulcers that require protection and support.

**Contraindications:**
Patients with a known hypersensitivity to the product itself or to its components, including zinc oxide or calamine. Unna boots are not intended to provide compression therapy in non-ambulatory patients.

**Change Frequency:**
Change dressing as directed by a healthcare professional, typically once or twice a week.

**Recommended Secondary Dressings:**
Cohesive bandage.

Multi-Layer Compression Bandage System

Multi-Layer Compression Bandage Systems are superior bandaging systems for optimal compression and absorbency in managing venous ulcer therapy. Multi-layered system simultaneous absorbs and protects, while providing graduated sustained compression.

Four-Layer Compression Bandage System:
- Non-woven padding composed of synthetic blend
- Crepe bandage to anchor and smooth padding layer
- Light compression bandage
- Cohesive bandage that sticks to itself and secures the bandages for week-long compression (not made with natural rubber latex)

Two-Layer Compression Bandaging System:
- Padding bandage that helps protect wounds with moderate compression
- Cohesive bandage that sticks to itself and secures the bandages for week-long compression

Indications:
Manage venous leg ulcers and related conditions. This system consists of four bandages that, when applied correctly, provide compression for up to seven days, depending on the amount of drainage.

Contraindications:
Prior to use, determine the Ankle Brachial Pressure Index (ABI) using a Doppler ultrasound.
- An ABI less than 0.8 may indicate the presence of significant arterial disease.
- Do not use this Bandaging System without direct medical supervision if the patient’s ABI is less than 0.8 or if arterial disease is suspected.
- While using this product, if the patient develops pain, numbness, color changes, cool toes or foot, the patient should seek immediate medical attention.
- Do not use this Bandaging System on patients with an ankle circumference less than 18 cm.
- Apply extra padding as needed over bony prominences of the ankle and/or tibia to avoid pressure necrosis.

Change Frequency:
Change dressing as directed by a healthcare professional.

Recommended Secondary Dressings: n/a
