Cleaning and Disinfecting Guide

McKesson TRUE METRIX® PRO Professional Monitoring Blood Glucose Meters*

A Guide For Multiple-Patient Use Facilities

All meters that are shared between patients must be cleaned and disinfected after use with each patient to prevent the transmission of bloodborne pathogens. This recommendation complies with the updated CMS, CDC and FDA best practices guidelines for assisted blood glucose monitoring. (See reverse side for details.)

To clean and disinfect the meter, we recommend using PDI Super Sani-Cloth® Germicidal Disposable Wipes (EPA reg. no. 9480-4).1

Always wash hands and wear gloves when performing blood glucose testing, and when cleaning and disinfecting the meter; contact with blood presents a potential infection risk.

To Clean: Make sure meter is off and a test strip is not inserted. Wipe the outside of the meter thoroughly with a fresh Super Sani-Cloth Wipe. Discard wipe.

To Disinfect: Using fresh wipes, ensure that the outside surfaces of the meter stays wet for 2 minutes. NEVER put meter in liquids or allow any liquids to enter the test port.

Repeat as needed until all surfaces are visibly clean. Discard used wipes.

Let meter thoroughly air dry before using it to test.

Properly dispose of gloves and wipes after cleaning. Wash hands after removing gloves.

1
**Important health and safety information**

Healthcare professionals should adhere to standard precautions and disinfection procedures when handling or using this device for testing. All parts of the McKesson TRUE METRIX® PRO Professional Monitoring Blood Glucose System are considered potentially infectious and capable of transmitting bloodborne pathogens.\(^2,^3\) For more information about standard precautions and practices, please visit www.cdc.gov/hicpac/2007IP/2007isolationPrecautions.html.

**Please note**

After cleaning and disinfecting, verify that the system is working properly by performing an Automatic Self-Test (see Getting Started).

Do not use the meter and call Customer Care for assistance toll free at 1-800-803-6025 if:

- Meter display appears cloudy or any display segments are missing
- Markings on meter, including back meter label, are coming off or missing
- “•”, “➢” or “◄” buttons are hard to push on meter or do not work (see Memory)
- Unable to insert test strip into test port
- Automatic Self-Test gives an error message

**Note:** Other disinfectants have not been tested. The effect of other disinfectants used interchangeably has not been tested with the meter. Use of disinfectants other than Super Sani-Cloth Wipes may damage meter.

**Note:** Super Sani-Cloth Wipes have been tested on the meter for a total of 10,950 cleaning and disinfecting cycles, which is equal to cleaning and disinfecting the meter 10 times per day for a 3 year period. The use life of the meter is 3 years.

---

1. Super Sani-Cloth wipes are commercially available from a variety of distributors. For more details about cleaning, please contact Nipro’s Customer Care department at 1.800.803.6025 or 1.954.677.4599 or visit pdipdi.com.
